PROFESSIONAL SUMMARY

Data & automation professional with nearly 3 years of work experience at **Abbott**, turning complex commercial and field-force data into actionable insights using **Python**, **SQL**, and **Power BI**. Built end-to-end automation for reporting, analytics, and commission management that cut processing times from hours to minutes and supported faster, data-driven decisions across departments.

SKILLS

Programming & Automation: Python (Pandas, NumPy), SQL, Streamlit, PySide6, GitHub Actions, Prompt Engineering, Hugging Face, OpenAI APIs

BI & Analytics: Power BI (DAX, dashboards), Tableau, Advanced Excel, data visualization

Commercial Operations & Stakeholder Management: KPI & MIS Reporting, Process Automation, Workflow Optimization, Requirement Gathering, Cross-Functional Coordination, UAT Support, Issue Tracking, SOP Documentation

EXPERIENCE

Manager — Commercial Insights

Jul 2025 – Present

Abbott

Previously Data Analyst — Commercial Insights (Oct 2023 – Jul 2025)

Supporting commercial teams through analytics, automation, reporting, and incentive management solutions across multiple business units.

- Automated **Focus Specialty Coverage** reporting, cutting ETL time from **30–40 minutes to 2–3 minutes** per BU for specialty-wise HCP coverage, frequency monitoring and territory performance measurement.
- Solved a recurring field-targeting problem by building analytics to flag **chronically missed HCPs** and **overcalled doctors**, enabling more balanced territory coverage.
- Built the **One Doctor Dashboard (Power BI)** enabling interactive analysis of HCP distribution, geographic coverage patterns, and territory-level performance insights
- Developed a Python-powered **Expense Dashboard** that highlighted spending trends, anomalies, and operational outliers, supporting data-driven financial monitoring and decision-making.
- Delivered **ad-hoc analytical reports** across BUs at multiple levels of the field hierarchy
- Developed **automation solutions** for KPI delivery, governance reporting, prescription reporting, and operational workflows used by NSMs, ZBMs, ABMs, and commercial stakeholders across multiple business units.

Incentive & Commission Management | across all BUs of EPD

- Automated **commission processing** across all BUs of EPD — monthly, quarterly, and special commissions, brand-wise rewards, and achievement calculations.
- Automated **payslip generation**; payslip gets generated now in **5–6 minutes**.
- Took full **product ownership** of iCMS, replacing a legacy Excel-frontend, Python-based commission tool that needed code changes for every circular or scheme update:
 - Built a no-code **Commission Calculation Wizard** with a JSON-driven rule builder covering eligibility validation, payout capping, multiplier logic, new-joiner rules, and month-winback logic — so rules could be reconfigured without touching code.
 - Replaced a multi-day, error-prone manual process with a guided workflow completing in **under an hour**.
 - Added a what-if simulator that drove strong **user adoption** among non-technical analysts.

Data Quality & Governance | Python, Fuzzy Matching

- Automated **data extraction** from Salesforce, cutting extraction time by **~70–80%** versus manual methods.
- Built **fuzzy-logic matching** to identify duplicate HCP records across systems, improving customer master data quality and audit compliance.

PROJECTS

B2B Recommendation System — Medrpha | Python, Apriori Algorithm — Market-basket analysis for B2B product recommendations.

EDUCATION

Mumbai University, SIES GST | B.E., Information Technology, Navi Mumbai

2019 – 2023

CERTIFICATIONS

Associate AI Engineer for Developers — DataCamp (2026) | **Data Analyst Cert.** — ExcelR (2023) |
